

Webnode

The easiest way to create the perfect business website

Unless you're a small business owner 50+, you need to have a website. These days building a business website or e-commerce store is easier than ever: it doesn't cost much money, you don't have to know how to code or design, your online store is not restricted to business hours, and it's one of the best means of free advertising.

Having a small business website isn't just about selling your goods and services — it's also about providing something of value to potential customers.

With so many low priced online services, there's really no excuse to keep putting it off. One of the great tools is a website builder Webnode. Webnode is an amazingly simple website builder. Launched in 2008, it has already helped over 30 million users create their own websites. It doesn't matter if you need a professional website for your company, a beautiful portfolio or a user-friendly e-shop, you have the right tool to build the website just the way you want.

Anyone can build a website with Webnode. You don't need to hire programmers or designers or pay for hosting. Simply choose one of the stunning templates and customize it in minutes. The webnode team is constantly bettering its website builder and developing new functions to provide you with all the tools you need to create the perfect website.

The website maker (builder) is known for its simplicity and allows users to create a site by dragging and dropping elements such as blogs, photo galleries and much more. Webnode is a drag-and-drop online website tool with 3 different website solutions: Personal websites, Business websites and e-commerce websites.

The system can be run on most Internet browsers such as Internet Explorer, Mozilla Firefox, Netscape, Google Chrome, Safari and Opera (Web browser).

One feature of Webnode is the possibility of creating and editing the website from a smartphone with connection to Internet.
